

What is claimed is:

1 1. A clamp to be placed and used on the tube of
2 a winged needle and for storing the needle after use,
3 the winged needle including a needle cannula, a hub with
4 a wing, and a tube connected to the hub, said clamp having
5 a proximal side and a distal side and comprising:

6 a flexible curved portion on the proximal side having
7 a tube insertion hole;

8 an upper member and lower member connected via said
9 curved portion, the upper member and the lower member
10 being detachably engaged at distal ends thereof so that
11 a clearance through which at least the wing of said winged
12 needle can be introduced is provided between the upper
13 member and the lower member when said members are not
14 engaged;

15 a pressurizing portion provided on said upper member
16 or lower member for engaging and pressurizing said tube
17 when said members are engaged; and

18 a space for storing said needle cannula and said
19 hub provided in the upper member or lower member

1 2. A clamp for winged needles according to Claim 1,
2 wherein the upper member is provided with a pair of left
3 and right engaging hooks at its distal end, and the lower

4 member is provided with an engaged portion for engaging

5 said engaging hooks.
